Project Gameplan

Use it for every project

- [ ] **1. Plan on paper (5 min)**
  Write in plain English what the program does, step by step, before writing any code.
- [ ] **2. Build it blind**
  Code it without looking at the lesson or old files. Stay stuck at least 5 minutes before you peek.
- [ ] **3. Small steps**
  Write a few lines, run, check. Never write the whole thing before running it.
- [ ] **4. Break it on purpose**
  Try bad inputs and typos, read the errors, and fix them.
- [ ] **5. Explain it out loud**
  Go line by line like you're teaching an apprentice. Any line you can't explain is what to review.
- [ ] **6. Send it to Practice Coach and Socratic Tutor**
  Get hints on fixes and dig into the why behind each piece, not full answers.
- [ ] **7. Rebuild tomorrow**
  Rewrite it from a blank file, then compare.

Ready to move on?

- [ ] I can build the day's project from scratch without peeking.
- [ ] I can explain every line.

If not, stay on that day. Going slower is fine.
